

# FTSE Latin America RIC Capped Index

Data as at: 29 March 2024

The FTSE Global RIC Capped Indexes are market-capitalization weighted indexes designed to limit concentration in any single security to help users meet the Regulated Investment Company (RIC) concentration requirements for US registered funds. The FTSE Global RIC Capped Indexes are a subset of the FTSE Global Equity Index Series (GEIS), which covers 99% of the world's investable market capitalization. The FTSE Latin America RIC Capped Index represents the performance of Latin American large and mid capitalization stocks. Securities are weighted based on their free float-adjusted market capitalization and reviewed semi-annually. To limit over concentration in any single security, constituents are capped quarterly so that no more than 20% of the index's weight may be allocated to a single constituent and the sum of the weights of all constituents representing more than 4.5% of the index should not exceed 48% of the total index weight.
